TOPCERAPHICAL MAP OF LONDON.
Mr. Ronert Mytwe has junt now iegued a first attempt at a contocr map of Lowdon and its dinstict. The date for levele ere founded upon the recent Ondanace aurvey. adop ing tbe well-known loced stendard detam of Trinity High Weter Mart. The contours indicate by shadinge, recceanive atepe of 10 fees eleration, by wheb the natural arface drainage and witer shed area of the metropolitan diatricts are well defioed. The rarious suild are dintinguished by different eotours. add, hy the combination of topography with geology, it facifitaser the comparion of the levele of the outeropping etrata and drift. deposits of aravel and buckearth losm.
The eub-sirata of Loraton were etudied, and eectings pabhabed of them, io March, leat year, by Mr. Mylae ; and the precent roap is grounded upon that, with the resolt of atill more recent invatigation.
In the diatrict of Woolwich and Greemwict the outcrop of tire distioct etratificationt are to be traced on the slope of the rising aroand from the River Thames, bened by ebalk, which appears on the eurface, -esused by a remark. able disturbance of fand in it stratum. In the neightiourhood of Aighignie and Hampmlead are shown the positina of the aandy upper beds of London clay, which oecupp a eonsidermble area, and hare beet but partially known, and never before mapped, mal by the and of the contoure they will be men to dip cunaiderably to the entrard,
